

$$cl_c(gh) = \left(\text{Diagram 1} \right)^2_1 = s(Y)^{|h|} \left(\text{Diagram 2} \right)^1_2 = (-1)^{|g||h|} s(Y)^{|h|} cl_d(hg)$$

The diagrammatic equation above involves two diagrams, each enclosed in a large rounded rectangle.
 Diagram 1 (left): Inside the rectangle is a vertical oval labeled Y . To its right is a cylinder with two horizontal sections. The top section contains a square labeled h and the bottom section contains a square labeled g . A dashed line is at the top of the cylinder. To the right of the cylinder are subscripts 2 and $_1$.
 Diagram 2 (right): Similar to Diagram 1, but the top section of the cylinder contains a square labeled g and the bottom section contains a square labeled h . The subscripts to the right are 1 and $_2$.
